The first of these Cases will happen when the Vessel moves in the Direction of the great Axe B A; and the other when it moves in that of the lesser Axe C D, from whence it seems that since is several times greater than P, the least Resistance ought to take place in the direct Course, where the Lee-way p vanishes. But it is certain that the Resistance will become still less for a particular Angle of Lee-way, which is found by taking the P Tang. p-and must in consequence be very P small; and since we then have $\sin. p = 1/4$ and p is less than Unity. Here is there $s/p - f/c$ fore this great Paradox, that by giving to the Vef p sel a small Lee-way f, such that Tang. p-- the Resistance will be found less than in the direct...
