

## Elementary internal combustion engines

Filesize: 5.93 MB

### ***Reviews***

*A brand new electronic book with a new standpoint. It is written in basic phrases rather than confusing. It has been designed in an extremely basic way which is merely right after I finished reading through this publication where basically altered me, change the way I believe.*

## ELEMENTARY INTERNAL COMBUSTION ENGINES

DOWNLOAD

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 40 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1919 Excerpt: . . . the weight of air required to completely burn 1 lb. of a fuel consisting of 0.9 lb. of carbon and 0.05 lb. of hydrogen. First find the weight of oxygen required to burn the carbon-- $C + O_2 \rightarrow CO_2$ . From the equation, 12 lbs. of carbon require 32 lbs. of oxygen, therefore 0.9 lb. of carbon will require  $\frac{32}{12} \times 0.9 = 2.4$  lbs. of oxygen. Then find the weight of oxygen required to burn the hydrogen-- $H_2 + \frac{1}{2}O_2 \rightarrow H_2O$  or 2 lbs. of hydrogen require 16 lbs. of oxygen, therefore 0.05 lb. of hydrogen will require  $\frac{16}{2} \times 0.05 = 0.4$  lb. of oxygen. 2 Total oxygen  $2.4 + 0.4 = 2.8$  lbs. of oxygen or  $3.8 \times 12 = 45.6$  lbs. of air since air consists of 23 per cent. of oxygen by weight. The equation  $CH_4 + 2O_2 \rightarrow CO_2 + 2H_2O$  also shows the relative volumes of marsh gas and oxygen taking part in the reaction. One molecule or one cubic foot of marsh gas combines with two molecules or two cubic feet of oxygen. Example. --A gas consists of 30 per cent. of CO by volume: find the volume of air required to burn one cubic foot of the gas. The equation is-- $2CO + O_2 \rightarrow 2CO_2$ , that is, two molecules or two cubic feet of CO require one molecule or one cubic foot of oxygen; therefore 0.30 cubic foot of the gas requires--cubic foot of  $O_2$  or 1.5 cubic foot. 2 Therefore volume of air  $\frac{1.5}{0.23} = 6.52$  cubic foot of air, since air consists of 21...
